Inventor:

Mrs. Sharon Snelling
sharon.snelling@famu.edu

Key Features:

Accommodates either
standard 8 1/2 X 11
documents, or legal 8 1/2
X 14 documents.

Field:

Business Administration

Technology:

Convertible Pocket File

Stage of Development:

First prototype complete.

Status:

Seeking investors/or
licensing partners.

Patent Status:
Pending

Background:

Folders are well-known in the art and are widely used for storing, securing or transporting documents. Pocket folders are equipped with compartments to receive and secure documents.

Statement of Problem:

Users are required to have different size folders, with different size compartments to accommodate different size documents. For example, users most often purchase two different packets of file folders to secure and transport their documents.

Potential Solution:

The Convertible Pocket Folder - can be used to transport both standard size and legal size documents. This new and improved folder can be converted to accommodate either the standard 8 1/2 X 11 documents, or legal 8 1/2 X 14 documents. No more wasting money on purchasing two packages of file folders; and no more shrinking the print on legal sized documents to accommodate the conventional sized folders.

Commercialization Status:

The inventor is currently seeking investors and/or licensees to fund the production of the invention.
